

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings of claims in the application.

Listing of Claims:

1. (Original) A digital camera comprising:
a plurality of mounting portions to which recording media can be mounted;
a detector which detects whether or not the recording media are mounted to said mounting portions; and
a selector which selects from among said mounting portions a portion to be accessed based on the detection result of said detector,
wherein, where at least two recording media are mounted to said mounting portions, said selector selects the mounting portion to which the recording medium was mounted first as the mounting portion to be accessed.
2. (Original) A digital camera according to claim 1 further comprising a first display which displays information regarding the mounting portion selected by said selector.
3. (Original) A digital camera according to claim 2 further comprising a second display which displays the picked-up image, and said first display and said second display are located separately from each other.
4. (Original) A digital camera according to claim 1,
wherein each of said mounting portions is a connector to be mechanically and electrically connected to each of the recording media.

5. (Original) A digital camera according to claim 1,
wherein each of said mounting portions is a slot inside of which each of the
recording media is housed.

6. (Original) A digital camera according to claim 1,
wherein each of said mounting portions has a slot inside of which each of the
recording media is housed and a connector to which the recording media housed in said
slot is mechanically and electrically connected.

7. (Currently Amended) A digital camera comprising:
a plurality of mounting portions to each of which a recording medium is mounted;
a mode setting member which is operated to set a mode from among a plurality of
selection modes, in each of said plurality of selection modes the mounting portion to be
accessed being selected from among said plurality of mounting portions; and
a selector which selects one of said mounting portions to be accessed from among
said plurality of mounting portions in accordance with the selection mode set by the
operation of said mode setting member,

wherein the selection modes include a mode in which the mounting portion in
which a storing medium was first mounted is selected as the mounting portion to be
accessed.

8. (Original) A digital camera according to claim 7,
wherein the selection modes include a mode in which a particular mounting
portion is selected as the mounting portion to be accessed at all times from among said
plurality of mounting portions.

9. (Cancelled)

Application No. 09/730,451
Amendment dated February 22, 2005
Reply to Office Action of November 30, 2004

10. (Original) A digital camera according to claim 7,
wherein the selection modes include a mode in which a mounting portion is
selected from among said plurality of mounting portions as the mounting portion to be
accessed based on an operation performed by means of an operating member.
